EDUCATION

Algonquin College <i>Graduate Certificate in CyberSecurity Analysis</i>	Ottawa, ON <i>Expected May 2026</i>
Carleton University <i>Bachelor of Information Technology in Network Technology, Co-op Option</i>	Ottawa, ON <i>September 2020 - April 2024</i>
Algonquin College <i>Advanced Diploma in Computer Engineering Technology - Networking</i>	Ottawa, ON <i>September 2020 - April 2024</i>

EXPERIENCE

Alto Train (HFR-TGF) <i>Security Engineering</i>	Ottawa, ON <i>May 2026 – Present</i>
- Supported Security Operations and Cyber Defence activities by onboarding and validating external log sources including SAP and DocuSign into Microsoft Sentinel, improving centralized security monitoring and visibility - Created and tuned KQL-based detection rules and analytics workflows in Microsoft Sentinel to identify suspicious activity, improve alert fidelity, and support SOC incident triage and threat detection efforts - Designed and implemented Azure DevOps CI/CD pipelines to automate the testing and deployment of web applications and manage Microsoft Sentinel detection rules as code, enabling version control, collaborative development, and seamless deployment of security content while reducing configuration conflicts across multiple contributors	
Housing, Infrastructure and Communities Canada <i>IT Security Analyst Student</i>	Ottawa, ON <i>March 2026 – May 2026</i>
- Led phishing triage operations by analyzing user-reported emails that bypassed secure email gateways, performing header, URL, and attachment analysis to accurately classify threats and reduce exposure across the organization - Engineered detection workflows in Microsoft Sentinel using KQL and Log Analytics, identifying high-frequency alert patterns and improving incident triage efficiency within the SOC - Built SOAR playbooks to automate closure of repetitive alerts and developed Power BI dashboards from Sentinel and Defender data, delivering real-time visibility into incident trends and SOC performance for executive reporting	
Shared Services Canada <i>IT Support Analyst(Contractor)</i>	Ottawa, ON <i>October 2024 – June 2025</i>
- Managed and resolved various support tickets using the SMax IT Service Management Tool and ONYX ticketing system, ensuring efficient issue tracking, escalation, and resolution while maintaining detailed and accurate documentation - Provided technical support to a high-volume user base, troubleshooting hardware, software, network, and mobile issues (Android & iOS) via BlackBerry UEM, minimizing downtime and boosting productivity - Administered user accounts via Micro Focus iManager, processing access requests, account unlocks, and security configurations, reducing account-related downtime by 15% and enhancing system security for seamless employee access	
LeisureDays RV Group <i>System Administrator Co-op</i>	Ottawa, ON <i>May 2023 – August 2023</i>
- Configured and optimized VPN tunnels on SonicWall firewalls, securely linking dealerships to the main Kingston server; replaced public port 8080 with secure port 6060 to ensure private communication, enhance security, and mitigate risks - Managed 10+ Microsoft Exchange groups to streamline organizational communication by creating shared mailboxes, distribution lists, and automated email rules, enhancing cross-team collaboration and reducing manual overhead - Implemented the Atera ticketing system across multiple dealerships by deploying Group Policy Objects (GPO) for automated software installation, replacing an outdated email-based system, resulting in faster issue resolution and improved IT support scalability	
Natural Resources Canada – CanmetENERGY <i>Research Assistant Co-op</i>	Ottawa, ON <i>May 2022 – August 2022</i>
- Developed a Python script to automate HOT2000 to EnergyPlus file transfers, enhancing data processing speed and cross-tool compatibility, reducing manual effort by 10% - Performed advanced energy modeling simulations using OpenStudio, EnergyPlus, PowerShell, and SketchUp, generating data-driven insights to support Canada's net-zero 2050 initiative and optimize building efficiency - Designed and refined 3D building prototypes in SketchUp with precise space classifications, improving heating and cooling efficiency assessments and enhancing energy consumption modeling accuracy	

PROJECTS

Enterprise SIEM Implementation & Cyber Threat Detection Lab

Cloud Security · Log Ingestion Pipelines · KQL · Snort IDS · Threat Detection · Incident Response

- Designed and deployed a cloud-based SIEM solution using Microsoft Azure Sentinel, connecting an on-premises Windows Server 2016 VM to Azure via Azure Arc and the Azure Monitor Agent (AMA), and configured multi-source log ingestion pipelines using custom Data Collection Rules (DCRs) for IIS web server logs, Windows Security Events, and Snort IDS alerts
- Authored KQL-based Sentinel Analytics Rules to detect brute force RDP attacks by thresholding Event ID 4625 failures, configured Snort IDS with custom rules to identify SYN, XMAS, FIN, UDP, and TCP scans in real time, and validated the full detection pipeline by simulating real-world attacks from Kali Linux using Hydra and Nmap

ARP Spoofing Detection and Mitigation Lab

Collaboration with General Dynamics Mission Systems - Canada (GDMS-C) and Field Effect

- Developed a step-by-step guide for ARP spoofing attacks using Kali Linux and Windows, integrated Python-based attack detection and mitigation strategies (e.g., ARP table inspection, static ARP entries), and collaborated with industry experts to align the lab with real-world cybersecurity practices on the CyberRange platform

SKILLS

Security: Incident Response, Threat Detection & Triage, Phishing Analysis, Email Security (SPF/DKIM/DMARC), SIEM (**Microsoft Sentinel, Splunk**), SOAR Automation, Log Analysis (KQL), Vulnerability Management (Nessus, Nmap), Windows Hardening, STIG/SCAP Compliance, Security Audits (ITSG-33, NIST), IAM and Access Control, Evidence Handling and Chain of Custody

Cloud & Infrastructure Security: Azure Security Controls, Microsoft Defender for Cloud, Network Security Groups (NSGs), Cloud Log Ingestion (Azure Arc, AMA)

Networking & Infrastructure: TCP/IP, LAN/WAN, DNS, DHCP, VPN (Site-to-Site/Remote), SNMP Configuration & Monitoring, Routing Protocols (**OSPF, BGP, EIGRP, MPLS**), VLANs, Subnetting

Network Security: Firewall Configuration (**SonicWall, Fortinet**), IDS/IPS (Snort), Network Traffic Analysis (Wireshark), Attack Simulations, Port Scanning & Detection

Digital Forensics: EnCase, FTK Imager, Autopsy, Magnet AXIOM, Memory Analysis, Windows Event Logs, Prefetch Analysis, Browser Forensics

Tools & Platforms: PowerShell, Python, Active Directory, Microsoft 365/Exchange, Azure, Power BI

Certifications: Google Cybersecurity Professional, CompTIA AI Essentials
